*Largest award in company history*

# **EHS Technologies awarded U.S. Navy contract valued at nearly \$3.5 million**

**MOORESTOWN, NJ** – August 1, 2007 EHS Technologies has been awarded a follow-on contract from the U.S. Navy Naval Ship Systems Engineering Station (NAVSSSES) valued at nearly \$3.5 million for a variety of technical services.

NAVSSSES is part of the Naval Surface Warfare Center, Carderock Division (NSWCCD). Naval Sea Systems Command (NAVSEA) is the overarching authority for both organizations.

It is the largest contract ever received by EHS Technologies in its 11-year history and the 3<sup>rd</sup> multimillion-dollar contract awarded to the Moorestown firm by NAVSSSES in four years.

Under the terms of the contract, EHS Technologies will provide systems engineering, test and evaluation support, technical support, integrated logistics support (ILS), information technology, communications, training and environmental support services for the implementation, execution, and development of ILS products and services for all platforms supported by NSWCCD-SSSES. VSD of Virginia Beach, VA and McKean Defense Group of the Philadelphia Naval Business Center, PA will serve as subcontractors on the contract to EHS Technologies.

William Eckerle, President of EHS Technologies, says that the contract reflects the Navy's confidence in the company's ability to deliver a wide array of quality technical services.

"Our team is proud that the Navy has again selected EHS Technologies to provide these complex and essential services," says Eckerle. "Our combination of technical expertise and commitment to quality will continue to ensure that the U.S. Navy is well prepared to meet the challenges of an uncertain global environment."

In addition, EHS Technologies recently moved its headquarters to Moorestown, NJ from adjacent Maple Shade. The larger facilities were necessary to provide office spaces for the firm's growing number of employees.

EHS Technologies is a Small Business Administration (SBA) 8a-certified, small woman-owned business formed in November 1996 that provides engineering, environmental, and information technology products and services to government and commercial customers. In addition to its Moorestown, N.J. headquarters, EHS Technologies has an office in Silver Spring, Md. It employs a total of 33 people. In 2005, EHS Technologies was named the third fastest-growing business in South Jersey by the *Philadelphia Business Journal*.
